A/Senior Agricultural Officer,
Jerusalem.

Subject:- State Domain - Habla Village.

Ref:- Our Joint Reconnaissance of the Site on 3.11.44.

The detailed inspection of the various plots of Block 7629 and 7628 of Habla have revealed that the classification of suitability to cultivation as shown on the maps attached to your file No.12/156 do not represent actual conditions. Rocky patches generally occupy a much larger percentage of the area than shown on the maps and areas shown as 60% or 80% cultivable land usually contain much less such land. Furthermore, the cultivable lands are often broken into tiny parts of good soil separated by stretches of bare rock or expanses of pebbles. Generally speaking, I consider that of the total area of about 3,000 dunams of the State Domain at Habla, only 1,000 can be cultivated while 2,000 could at best be used for scanty grazing and patchy afforestation.

Of the cultivable lands at Habla, I believe, that the pieces of flat and deep soils, which aggregate at best into an area of 2-300 dunams, could be used for field crops. The rest of the cultivable lands may be used, after clearing, terracing and contouring, for fruit growing. The only suitable fruit crops for this area are, in my opinion, by order of importance the olive, the grapevine, figs, the carob (for rocky patches), and some stone fruit trees. I do not consider that the conditions are suitable for any unirrigated pome fruit trees.

3. The fellaheen of Habla are mostly keen on increasing the areas under field crops. This is due to the acute shortage of arable land in the village. It is to be feared that, if they are allowed to make free use of the land of the State Domain, they will try to plough every bit of it for field crops with the resulting severe damage by erosion. On the other hand they seem not to be in a financial position to make long term investments in terracing and planting slow growing fruit trees, and financial aid would probably be necessary if the area in question is to be developed in accordance with soil erosion schemes based on fruit growing.

Your file and maps are herewith returned.

ACT. AGRICULTURAL OFFICER,
TEL-AVIV.
